### **Clinical Interpretation & Recommendations**

#### **Overall Sleep Health Assessment**

Sleep Quality Level: POOR

Poor sleep quality with multiple metrics outside normal ranges. The subject's sleep architecture shows:

• Sleep Efficiency: 32.9% (Below normal)

REM Sleep: 21.4% (Normal)Deep Sleep: 1.6% (Reduced)

• Sleep Continuity: Fragmented (WASO: 509.2 min)

### **Key Findings**

- **Reduced Sleep Efficiency**: At 32.9%, sleep efficiency is below the normal threshold of 85%, indicating potential sleep quality issues.
- **Normal REM Sleep**: REM sleep comprises 21.4% of total sleep, which is within the normal range.
- **Reduced Deep Sleep**: Deep sleep stages (N3+N4) comprise 1.6% of sleep, which may indicate reduced sleep restoration.

#### Recommendations

- Consider sleep hygiene counseling and evaluation of factors affecting sleep quality
- Assess sleep environment and factors that may be disrupting deep sleep stages
- Investigation of factors causing sleep fragmentation may be beneficial
